

ENMON | **GRANITNE
PLOČICE**
www.enmongroup.com

GRANITNE PLOČICE

Granitne pločice su proizvod izuzetnog kvaliteta zbog specijalne tehnologije izrade i strukture materijala od kojeg su napravijene.

Za izradu granitnih pločica koristi se bela glina zato što se pomoću nje može proizvesti efekat prirodnih materijala kao što je kamen. Koriste se specijalne glazure koje se mogu peći na visokim temperaturama a proizvodu daju veću otpornost na habanje.

Granitna keramika ima bolje tehničke karakteristike od ostalih pločica a to su:

- upijanje vode od 0-1,5
- velika otpornost na habanje
- otpornost na kiseline i baze
- otpornost na mrlje

Kod proizvodnje granita različite tehnologije i materijali koji se koriste za površinski sloj daju mogućnost za imitaciju kamena, mermera, prirodnih granita, tehničkih granita, drveta, tekstila i dr.

Pomenućemo neke od proizvoda koji nose ime tehnologije po kojoj su proizvedene:

- FULL BODY je tehnologija kod koje je struktura materijala i po boji i po sastavu po celom preseku pločice ista
- DOUBLE LOADING je tehnologija koja omogućava da se dobiju intezivne boje površine materijala tj. pločica
- LAPATO EFEKAT je efekat koji se postiže naknadnom obradom granita tehnikom poliranja površine. Poliranjem se dobija efekat sjajnih i mat površina.

Postoje i druge tehnike dekoracije kojima se mogu dobiti različiti efekti kao imitacija kamena, tekstila, drveta, metala...

Sve ovo omogućava veliku primenu granitne keramike za spojno i unutrašnje oblaganje.

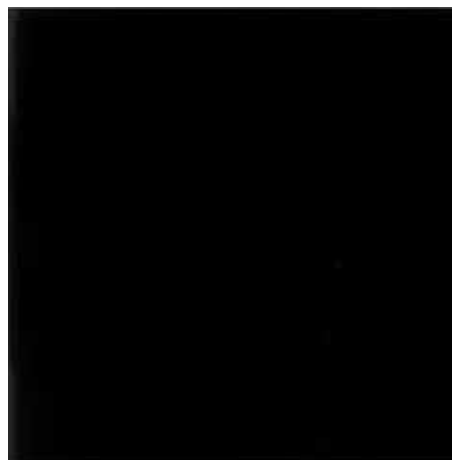

Granitna keramika je takode pogodna zbog svojih karakteristika za prostore gde je velika frekvencija ljudi.

Dobre karakteristike su dovele do velikog korišćenja granitne keramike a mi Vam kroz veliki asortiman robe pružamo mogućnost da izaberete baš naš proizvod.

WATER JET

Water Jet je najnovija generacija proizvoda bazirana na najsavremenijim tehnologijama.

Ovaj sistem se sastoji od pojačivača pritiska, trodimenzionalne CNC mašine alatke i pomoćnog kompjuterskog CAD-CAM sistema.

Water Jet mašina može komprimovati vodu na pritisak do 300 MPa, tada vodeni mlaz ima brzinu od 800 -1000 m/s preko dijamantske mlaznice. Ciji je prečnik otvora 0,26 mm. Takav vodeni mlaz sa malim dodatkom peska može se i različite vrste materijala (keramiku, staklo, kamen, čelik, aluminijum, plastiku, gumu).

Water Jet je specijalno pogodan za sečenje komplikovanih kontura.

Mašina za kontinuirano sečenje keramike i granita seče pomoću dijamantskih diskova uz pomoć vode koja služi za hlađenje. Mašina može da urezuje i iseca pravolinijske geometriske oblike na granitnoj keramici.

Mašina za obaranje i poliranje lučnih ivica (mašina za izradu gazišta i batiskopa). Mašina koristi dijamantske noževe i 14 polir glava za poliranje. Ovakvim postupkom izrade od različitih materijala kao što su granitna keramika ili mermer dobijamo batiskope i gazišta vrhunskog kvaliteta.
